General Design Features

OPERATING PRINCIPLE

The Hedland flow meter is a variable area instrument. A precision machined, sharp-edged Orifice ① located within the Piston Assembly ②, forms an annular opening with the contoured Metering Cone ③. The Piston Assembly carries a cylindrical PPS/Ceramic Magnet ④ that is magnetically coupled to an external Flow Indicator ⑤ that moves precisely, in direct response to movement of the Piston. A calibrated Spring ⑥ opposes flow in the forward direction. This spring decreases viscosity sensitivity and allows the flow meter to be used in any position, including inverted.

Bi-directional flow capability: If required, a reverse flow by-pass option is available and is depicted on individual product pages. Note that flow is measured in the forward direction only.

Operates in any position: The Hedland in-line flow meter's unique spring-loaded variable area design allows meters to be installed in any position without affecting accuracy. An optional inverted flow scale is also available.

Easier to read linear scale: This flow meter is the most readable product in its class. Brightly colored indicators move over the graduated, linear Flow Scale ⑦ which contains bold, easy-to-read numerals and gauge marks. This enhanced resolution virtually eliminates parallax problems associated with competitive, direct reading flow meters.

360° Rotatable guard/scale: Hedland's unique design allows the meter to be installed in any orientation without regard to scale direction. Once the meter is permanently installed, the guard/scale can be rotated 360° to optimize readability.

Rugged construction: Flow meters are available in anodized aluminum, brass, T303 and T316 stainless steel, with SAE, NPTF, BSPP, and Code 61 and Code 62 4-bolt flanged ports. This easy-to-read flow meter is a reliable and trouble-free flow rate indicator, monitoring a variety of liquids and gases (including aggressive chemicals), under a wide range of pressures, temperatures and rigorous conditions encountered in industrial applications.

No flow straighteners or special piping: The Hedland design does not require special plumbing or accessories to stabilize turbulent flow. Flow meters can be installed immediately adjacent to 90-degree elbows or other components to provide greatest system design flexibility, while saving installation time and money.

Relatively insensitive to shock and vibration: This unique design is inherently less sensitive to shock and vibration than other variable area flow meters. The new, improved coupling forces between the internal and external magnets greatly reduce the chance of decoupling the flow indicator under high flow and pressure transients. The magnetic coupling also eliminates the need for mechanical linkages that wear, loosen and leak over the functional life of competitive meters.

Technical Information

Liquid & Gas Flow Meters

REPEATABILITY WITHIN $\pm 1\%$:

Flow meter repeatability is within $\pm 1\%$. This is particularly important in cyclical applications, which require consistent readings.

OPERATING TEMPERATURE:

Standard operating temperature range is -20 to +240 °F (-29 to +116 °C). High Temperature flow meter range is -20 to +400 °F (-29 to +204 °C) continuous, and +400 to +500 °F (+204 to +260 °C) intermittent. Maximum operating pressure of aluminum and brass body flow meters is reduced for temperatures over 240 °F (116 °C). Stainless steel flow meters do not require derating. Refer to pressure derating charts in the High Temperature flow meter section.

OPERATING PRESSURE:

Liquids: Maximum operating pressure of aluminum and brass flow meters is 3,500 psi (241 bar) in $\frac{1}{4}$ to $1\frac{1}{2}$ inch sizes and 800 psi (55 bar) for 3 inch meters. Type 303 and 316 stainless steel flow meters have a 6,000 psi (414 bar) maximum operating pressure in $\frac{1}{4}$ and $\frac{1}{2}$ inch models and 5,000 psi (345 bar) maximum operating pressure in $\frac{3}{4}$ to 1 $\frac{1}{2}$ inch models. All liquid flow meters are designed with a 3:1 safety factor. High temperature affects maximum operating pressure. Refer to pressure derating charts in the High Temperature flow meter section.

Air/Gases: Maximum operating pressure of aluminum and brass flow meters is 1,000 psi (69 bar) in $\frac{1}{4}$ to $1\frac{1}{2}$ inch sizes and 250 psi (17 bar) for 3 inch meters. Type 303 and 316 stainless steel flow meters have a 1,500 psi (103 bar) maximum operating pressure. All air/gas flow meters are designed with a 10:1 safety factor. All pneumatic test kits are limited to a maximum operating pressure of 600 psi (41 bar) by the control valve pressure rating. Consult factory for high pressure use.

Fatigue Rating: per NFPA T2.6.1R1-1991 - C/90 (see page 7 for further details).

PRESSURE DROP (ΔP):

Refer to pages 61 to 66 for Flow vs. Pressure Drop data for oil, phosphate ester, water-based fluids, water, and air.

FILTRATION:

Although Hedland flow meters are more contamination tolerant than most fluid system components, 200 mesh (74 micron) or better filtration is required to ensure reliable performance.

CALIBRATION:

Oil, PE and WBF flow meters are calibrated with 0.876 specific gravity, 140 SUS (32cSt) hydraulic oil, irrespective of final fluid use. After calibration, PE and WBF flow meters are computer corrected for 1.18 s.g. and 1.0 s.g. respectively. Water meters are calibrated with water at 1.0 specific gravity. Air and gas meters are calibrated with air at 1.0 specific gravity (70 °F at 100 psi).

FLOW METER CERTIFICATION

There are three (3) types of certificates available with the Hedland Flow Meter:

1. Certificate of Conformance
2. Calibration Certificate
3. Certified Drawing

Certificate of Conformance: This document states that the specified Hedland Flow Meter meets the performance standards indicated in the Hedland Catalog. The certificate is signed by the Corporate Quality Assurance Manager or authorized delegate and should meet most needs for performance certification.

Calibration Certificate: This document contains the actual flow vs. indicated flow of a specific flow meter. It documents the error of each flow point relative to the stated tolerance limit. The master meters used to calibrate flow meters are traceable to the National Institute for Standards and Testing (NIST).

Meter Type	Traceable Range
Petroleum-based	0.02 to 400 GPM/0.08 to 1514 LPM
Water-based	0.02 to 325 GPM/0.08 to 1230 LPM
Air/gas	0.5 to 1000 SCFM/0.24 to 472 LPS

Certified Drawings: Certified assembly prints are available and contain:

1. Final meter assembly with part number and dimensions
2. Parts list by part number and description
3. Authorized drawing signatures

Reproducible ANSI A-D size drawings are available on standard bond paper. Large size drawings can also be reduced to ANSI A or B sizes. ACAD R13 and 2000 drawings can be sent by electronic format when requested.

Certificate of Origin and Flow Meter Tags also available upon request.

Liquid Flow Meter

Application Information

STANDARD FLOW SCALES:

Standard liquid flow scales are calibrated in gpm and lpm at 0.876 specific gravity for petroleum-based fluids, 1.18 s.g. for phosphate ester based fluids and 1.0 s.g. for water and water-based fluids. For field conversion of the standard scale to other fluids, see liquid propane example below.

SPECIAL FLOW SCALES:

Special scales are available for liquids and gases in any measurement unit, and other fluid viscosities and/or specific gravities.

VISCOSITY EFFECT (SUS/cSt):

Hedland's design utilizes a precision machined, sharp-edged orifice and biasing calibration spring that ensures operating stability and accuracy over the wide viscosity range common to many fluids. Generally, high flow models of each meter size provide good accuracy over a viscosity range of 40 to 500 SUS (4.2 to 108 cSt).

DENSITY EFFECT (specific gravity):

Any fluid density change from stated standards has a proportional effect on meter accuracy. Special scales can be supplied if actual specific gravity decreases accuracy beyond application limits.

Corrections for more or less dense fluids can be made to standard scales using the following correction factor:

$$\sqrt{1.0 / \text{specific gravity}}, \text{ for water/water-based meters}$$

$$\sqrt{0.876 / \text{specific gravity}}, \text{ for petroleum-based meters}$$

Example: Measuring liquid propane with petroleum meter

Fluid ~ Liquid Propane (LPG)

Scale Measured Flow ~ 28.5 gpm

1. Select (LPG) specific gravity from the Fluid Selection Chart = 0.51
2. Since petroleum meter is utilized, select petroleum formula
3. Divide 0.876 by 0.51 = 1.72
4. Take square root of 1.72 = 1.31 (correction factor)
5. Multiply scale reading by 1.31, 28.5 (indicated flow) $\times 1.31(\text{correction factor}) = 37.3 \text{ gpm}$ (actual flow of liquid propane)

This correction may be ignored for petroleum-based hydraulic fluids.

Pneumatic Flow Meter

Application Information

SELECTING A HEDLAND PNEUMATIC FLOW METER

Flow meters are offered in Aluminum, Brass, T303 and T316 Stainless Steel. This wide alloy selection allows for applications from relatively benign dry compressed air to corrosive gases such as hydrogen chloride or sulfur dioxide.

Aluminum, Brass and Type 303 Stainless Steel are available in four configurations: Standard inlet and outlet ports, an extended inlet cap fitted with a pressure gauge, an extended inlet cap with a 1/4 inch NPTF plugged gauge port, and a test kit with an extended inlet cap fitted with a 160 psi pressure gauge and control valve on the outlet.

Consult the factory for the configuration best suited to your application.

STANDARD FLOW RATE SCALES – AIR/GASES

The Hedland Pneumatic Flow Meter is offered with a standard Multi-Pressure Flow Scale.

The **Multi-Pressure Flow Scale** (Figure 1) has a vertically graduated scale, calibrated for air in standard cubic feet per minute (scfm) at 1.0 s.g. (70 °F at 100 psi), or liters per second (lps) at 1.0 s.g. (21 °C at 6.9 bar). The multi-pressure scale design allows for use at line pressures from 40 to 130 psi in 10 psi increments (3.0 to 9.0 bar in 1 bar increments). This configuration **requires** that a pressure gauge be installed at the meter inlet.

To use, the operator reads the inlet gauge pressure and selects the appropriate vertical line or interpolated value closest to the gauge reading and follows the line until it intersects the brightly colored horizontal indicator bar. The flow rate in scfm/lps is read by taking the intersection point and following the slope of the closest diagonal line to a scale value and interpolating the scfm/lps flow rate. No further calculations are required.

Figure 1. Multi-Pressure Flow Scale

A special **Single Pressure Flow Scale** is available in U.S. and metric units for an additional charge, see Price and Availability Digest, Form 000141. This is a graduated scale, calibrated for air in standard cubic feet per minute (scfm) at 1.0 s.g. (70 °F at 100 psi), or liters per second (lps) at 1.0 s.g. (21 °C at 6.9 bar), see Figure 2, Single Pressure Flow Scale, for further details. A standard cubic foot of air is defined as a cubic foot of air at 70 °F, at atmospheric pressure 14.7 psia at sea level. Since it is impossible to flow air at "standard" conditions the scale is calibrated for an inlet condition of 100 psi (6.9 bar) at 70 °F (21 °C). A correction factor must be calculated to determine the actual air volume. Each meter is supplied with the Conversion Chart shown in Figure 3.

Hedland can also supply a specially calibrated scale for higher or lower fixed pressures in any measurement unit, and other fluid specific gravities. Consult factory for details.

Chart Calculations and Flow Meter Sizing (SCFM Applications)

Compressibility of Gases

Since gases are significantly compressible, their density varies with pressure and temperature. Tables 1 & 2 of the Conversion Chart shown in Figure 3 are used to convert "indicated" scfm flow rates to "actual" scfm flow rates for your application.

Effects of Specific Gravity

Standard scales are calibrated for air with a specific gravity of 1.0. Table 3 of the Conversion Chart shown in Figure 3 is used to calculate "actual" scfm flow rates of gases with a specific gravity other than 1.0.

3. Specific gravity correction for natural gas, s.g. = 0.60

$$f_3 = \sqrt{0.60} = .775$$

4. Make total correction calculation. f_{total}

$$f_{\text{total}} = f_1 \times f_2 \times f_3 = .861 \times .971 \times .775 = .648$$

5. To determine actual flow vs. indicated flow: read indicated flow at 100 psi vertical line on the multipressure scale (see Figure 1) and apply correction factor.

$$\text{scfm (actual)} = \frac{55 \text{ scfm (indicated)}}{.648 (f_{\text{total}})} = 84.9$$

6. 10 psid maximum

See page 66 for pressure drop (ΔP) to find the appropriate size/flow range to meet the 10 psid requirements.

7. To determine which standard Hedland meter is required to achieve desired maximum flow of 85 scfm.

$$85 \text{ scfm (max flow)} \times .648 (f_{\text{total}}) = 55.1 \text{ scfm}$$

8. From the example – model H671A-100 or H771A-100 can be selected. Both meet the 55.1 scfm flow requirement and operate with less than 10 psid. The actual scale range can be calculated as follows:

$$10 \text{ scfm (standard)} \div .648 (f_{\text{total}}) = 15.4 \text{ scfm (actual)}$$

$$100 \text{ scfm (standard)} \div .648 (f_{\text{total}}) = 154.3 \text{ scfm (actual)}$$

Conversion Information

Chart Calculations and Flow Meter Sizing (ACFM Applications)

Example:

Operating Parameters

Fluid ~ Air

Line Pressure ~ 35 psig

Temperature ~ 70 °F

Desired Maximum Flow ~ 20 acfm

Since acfm measurements are not relative to the standard 1 atmosphere condition (14.7 psia), the volume of a cubic foot at 35 psig must first be related to the volume it would occupy at 1 atmosphere. The two volumes are related through Boyle's Law.

Since, $V \propto \frac{1 \text{ Atm}}{\text{Atm}}$, then $V_1 P_1 = V_2 P_2$, and

$$V_1 = 20 \text{ acfm}$$

$$P_1 = 35 \text{ psig} + 14.7 \text{ psig}$$

$$V_2 = \text{scfm}$$

$$P_2 = 14.7 \text{ psia}$$

$$V_2 = \frac{V_1 P_1}{P_2} = \frac{20 \times (35 + 14.7)}{14.7} = 67.62 \text{ scfm}$$

To correct for density at 35 psig; Use Figure 3 (Tables 1, 2 & 3) on page 6.

$$f_1 = \sqrt{\frac{114.7}{14.7 + 35}} = 1.52$$

$$f_2 = 1.0$$

$$f_3 = 1.0$$

$$f_1 \times f_2 \times f_3 = 1.52 \times 1.0 \times 1.0 = 1.52 = f_{\text{total}}$$

$$V_2 \times f_{\text{total}} = \text{Hedland indicated flow}$$

$$67.62 \times 1.52 = 102.78 \text{ scfm indicated}$$

A Hedland meter installed in this system would indicate 103 scfm. Hedland can also supply a custom calibrated scale for higher or lower fixed pressures in any measurement unit, and other fluid specific gravities. Consult factory for details.

3500/6000 PSI Flow Meters

For Petroleum Fluids

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Good viscosity stability
- Temperature up to 240 °F
- Accuracy ±2% full scale
- Repeatability ±1%
- Special scales available
- Calibrated for .876 S.G.

* SAE ports will accept both light-duty (SAE J1926-3) and heavy-duty (SAE J1926-2) stud ends, except 1/4 (SAE 6) size, which will accept only light-duty (SAE J1926-3) studs ends.

REVERSE FLOW BY-PASS OPTION: Features a two-piece cone that responds to flow in the primary flow direction in the same manner as the standard design.

Flow in the reverse direction causes the lower cone shuttle to shift, moving it below the sharp-edged piston orifice. This shift creates a gap which allows the fluid to flow freely in the reverse direction.

3500/6000 PSI Test Kits

For Phosphate Ester Fluids

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Good viscosity stability
- Temperature up to 240 °F
- Accuracy $\pm 2\%$ full scale
- Repeatability $\pm 1\%$
- Special scales available
- Calibrated for 1.18 S.G.

NOTE: **TK** suffix represents standard test kit configuration. For reverse flow by-pass test kit, replace **TK** suffix with **RT** suffix.

NOTE: **RT** option is not available with standard brass flow meters.

REVERSE FLOW BY-PASS OPTION: Features a two-piece cone that responds to flow in the primary flow direction in the same manner as the standard design. Flow in the reverse direction causes the lower cone shuttle to shift, moving it below the sharp-edged piston orifice. This shift creates a gap which allows the fluid to flow freely in the reverse direction.

3500/6000 PSI Flow Meters

For Water-based Fluids (Water/Oil Emulsions)

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Good viscosity stability
- Temperature up to 240 °F
- Accuracy ±2% full scale
- Repeatability ±1%
- Special scales available
- Calibrated for 1.0 S.G.
- For 80/20 and other water/oil emulsions

TEMPERATURE RANGE: -20 to +240 °F (-29 to +116 °C) for higher temp. meters, see page 31.

PRESSURE RATING:

Aluminum / Brass Operating: 3,500 psi/241 bar max. (800 psi/55 bar max.

for 3" series) with a 3:1 safety factor.

For High Cycle Applications: See page 7

Stainless Steel Operating: 6,000 psi/414 bar max. (5,000 psi/345 bar max. for 3/4" to 1 1/2" series and 4,000 psi/276 bar max. for code 62 flange) with a 3:1 safety factor.

For High Cycle Applications: See page 7

PRESSURE DROP: See Ordering Information Table, page 26.

For detailed differential pressure charts, see page 63.

ACCURACY: ±2% of full scale, ±7% of full scale for 1/4" meters REPEATABILITY: ±1%

REVERSE FLOW BY-PASS OPTION: Features a two-piece cone that responds to flow in the primary flow direction in the same manner as the standard design.

Flow in the reverse direction causes the lower cone shuttle to shift, moving it below the sharp-edged piston orifice. This shift creates a gap which allows the fluid to flow freely in the reverse direction.

Scale Support: 6063 - T6 Aluminum

Guard: Polycarbonate

End Caps: Nylon ST

THREADS: SAE J1926/1, NPTF ANSI B2.2, BSPP ISO1179

TEMPERATURE RANGE: -20 to +240 °F (-29 to +116 °C)

PRESSURE RATING:

Aluminum / Brass Operating: 3,500 psi/241 bar max. with a 3:1 safety factor.

For High Cycle Applications: See page 7

Stainless Steel Operating: 6,000 psi/414 bar max. (5,000 psi/345 bar max. for $\frac{3}{4}$ " series) with a 3:1 safety factor.

For High Cycle Applications: See page 7

PRESSURE DROP: See Ordering Information Table, page 28.

For detailed differential pressure charts, see page 63.

ACCURACY: $\pm 2\%$ of full scale

REPEATABILITY: $\pm 1\%$

PRESSURE GAUGE: Glycerin damped, 0 - 3,500 psi / 0 - 240 bar pressure range available on aluminum and brass test kits.

Glycerin damped, 0 - 6,000 psi / 0 - 400 bar pressure range available on stainless steel test kits.

LOAD VALVE: $\frac{1}{2}$ ", $\frac{3}{4}$ " and 1" series - needle valve;

Produce ΔP up to 3,500 psi/241 bar PSID and 6,000 psi/414 bar PSID.

NOTE: TK suffix represents standard test kit configuration. For reverse flow by-pass test kit, replace TK suffix with RT suffix.

NOTE: RT option is not available with standard brass flow meters.

REVERSE FLOW BY-PASS OPTION: Features a two-piece cone that responds to flow in the primary flow direction in the same manner as the standard design. Flow in the reverse direction causes the lower cone shuttle to shift, moving it below the sharp-edged piston orifice. This shift creates a gap which allows the fluid to flow freely in the reverse direction.

Normal Flow Direction

Reverse Flow By-Pass

CAUTION: For emulsions with less than 20% oil, factory recommends the Brass body meter.

3500/5000 PSI Test Kits

For Water-based Fluids (Water/Oil Emulsions) (1-1/4" and 1-1/2")

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Good viscosity stability
- Temperature up to 240 °F
- Accuracy ±2% full scale
- Repeatability ±1%
- Special scales available
- Calibrated for 1.0 S.G.
- For 80/20 and other water/oil emulsions

3500/6000 PSI Flow Meters

For Water and Other Liquids

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Good viscosity stability
- Temperature up to 240 °F
- Accuracy ±2% full scale
- Repeatability ±1%
- Special scales available
- Calibrated for 1.0 S.G.

1500 PSI Flow Meters

For Air / Caustic and Corrosive Gases

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Temperature up to 240 °F
- Accuracy ±2% full scale
- Repeatability ±1%
- Special scales available

②Fractional sizes apply to NPTF and BSPP.

③SCFM/PSI multipressure scales are standard.

④L/sec/bar multipressure

scales are available at no extra charge.

⑤3 inch models have BSPT (BS21) threads

⑥EP and EG options are only available with
NPTF and BSPP models.

600 PSI Test Kits

For Air and Other Compressed Gases

- Direct reading
- Install in any position
- 360° rotatable guard/scale
- Easier-to-read linear scale
- No flow straighteners or special piping required
- Relatively insensitive to shock and vibration
- Temperature up to 240 °F
- Accuracy $\pm 2\%$ full scale
- Repeatability $\pm 1\%$
- Special scales available

Flow-Alert™ Flow Switches (Micro Switch)

For Liquids / Air and Other Compressed Gases

- Automatically signals alarm if flow is too high or too low
- Automatically opens or closes electrical circuits
- Triggers warning lights, buzzers and other devices
- Shuts down pumps and/or other equipment to protect your operation against permanent damage
- Available from $\frac{1}{4}$ " to $1\frac{1}{2}$ " sizes in aluminum, brass and stainless
- Installs in any position
- Easier-to-read linear scale
- No flow straighteners or special piping requirements
- Relatively insensitive to shock and vibration
- Special scales available

ENCLOSURE:

Material: Anodized and epoxy powder-coated aluminum with polycarbonate lens.

Seals: Silicone gasket between enclosure and lens.

Viton® O-rings between enclosure and flow meter body.

Connection: Pig-tail conductor (standard) with water-tight strain relief.

Other connections, including quick-disconnect, are available – consult factory for details.

Fastener: T303 SS

Rating: NEMA 12 & 13 (IP52/54)

ELECTRICAL CIRCUITRY:

Adjustable Flow-Alert™ signal: single (1) or double (2) switch, pre-wired single-pole, double-throw (SPDT) with high or low flow limit setting, adjustable over the entire flow measuring range. Other switches are available – consult factory for details.

10A @ 250 VAC maximum, 0.5A @ 125 VDC maximum.

All Flow-Alert sizes (1/4 to 1 1/2 inch series) are offered in single (1) switch or double (2) switch models.

The single switch model is supplied with a 34" length of 4-wire #18 AWG jacketed cable.

The double switch model is supplied with an 18" length of 7-wire #16 AWG jacketed cable.

Optional 8 ft. cables are available – consult factory for details.

MR Flow Transmitters

For Liquids / Air and Other Compressed Gases

- Full line of multi-functional remote flow indicators and transmitters
- Operate as part of a totally integrated electronic process control/data acquisition system
- Non-contact sensor electronics
- Electronic signal conditioning circuit
- Digital flow rate and total flow indication
- Proportional analog output
- In-field compensation for Specific gravity of all fluids Viscosity of petroleum-based fluids Specific gravity, pressure, and temperature of pneumatic systems
- CE compliant- exceeds US and meets European standards for EMI/EMC
- US Patent 7,130,750

SCHEMATICS:

The transmitter can be wired in various configurations to allow interface with many different types of data collection and control instrumentation.

Schematics 1 & 2 represent typical wiring for a target powered by either AC power or DC supply. Schematics 3 & 4 will be utilized when the flow transmitter is operated with loop-powered process indicators or data loggers that do not have external sensor excitation available.

Schematic 1: 4-20 mA connection using target power supply

Schematic 2: 0-5 Vdc or 0-10 Vdc connection using target power supply

Schematic 3: 4-20 mA connection using target external power supply

Optional Remote Display and Signal Processor:

Hedland also offers the F6700/F6750 Series Digital Display with integrated signal processor capabilities to further enhance the utility of the MR Flow Transmitters. In addition to remote flow monitoring, these units can be configured to provide alarm processing and communication options including RS232, RS485, Modbus, Profibus and DeviceNet. For complete product specifications, refer to page 59.

Digital Display

For Hedland® MR Flow Transmitters

Applications

- Remote flow meter monitoring
- Totalizing
- Alarm processing
- Process control

Features

- 5-digit rate display
- 5-digit totalizer with 4-digit overcarry
- Input: 4-20 mA or 0-10 VDC
- Built-in transmitter power supply
- Three plug-in card slots
- Optional setpoint alarm cards
- AC and DC powered versions
- NEMA 4X/IP65 rated

Introduction

The F6700/F6750 series digital display with integrated signal processor accepts a 4-20 mA or 0-10 VDC signal from Hedland's **MR Flow Transmitters** as well as any other 4-20 mA or 0-10 VDC source. These 5-digit displays can be scaled to most engineering units and are easily programmed using the front panel buttons or available programming software. To meet your specific requirements, each display accepts up to three optional plug-in cards. One card for each of the following function types can be installed in each display:

Analog Outputs – A linear DC output signal card will be set up to provide either 4-20 mA, 0-20 mA or 0-10 VDC signals and can be scaled independent of the input range.

Communications – Optional plug-in cards to facilitate digital communications include: RS232, RS485, Modbus, Profibus and DeviceNet.

Setpoint Alarms – Select from dual FORM-C relays (5 Amp), quad FORM-A relays (3 Amp) or either sinking or sourcing quad open collector logic outputs.

The analog output and communication cards will be installed by the factory at time of order, or they may be installed by the customer at a later date. The setpoint alarm cards are available for customer installation and setup only.

SPECIFICATIONS:

Display:	5-digit, 0.56" sunlight-readable red LED
Power:	
AC	85 to 250 VAC, 50/60 Hz, 15 VA
DC	11 to 36 VDC, 11 W
A/D Converter:	16-bit resolution
A/D Conversion Rate:	20 readings/sec
Display Update Rate:	1 to 20 updates/sec
Sensor Inputs:	4-20 mA or 0-10 VDC
Transmitter Power:	24 VDC, $\pm 5\%$, regulated 50 mA maximum
Totalizer Time Base:	Second, minute, hour or day
Total:	9 digits, display alternates between high order and low order readouts
Linearization Data	
Point Pairs:	Selectable from 2 to 16
Operating Temperature:	32 °F to 122 °F (0 °C to 50 °C) (32 °F to 113 °F with all three plug-in cards installed)

EZ-View® Flow Meters

General Design Features

OPERATING PRINCIPLE

The EZ-View Flow Meter is a variable area instrument. A precision-molded, sharp-edged Orifice (1), located within the Piston Assembly, (2) forms an annular opening with the Metering Cone (3). Flow through the meter creates a pressure differential across the sharp-edged orifice, moving the piston against the Spring (4). The piston moves precisely, in direct proportion to the rate of flow. The calibrated spring opposes flow in the forward direction. This spring decreases viscosity sensitivity and allows the flow meters to be used in any position, including inverted. The indicated flow rate is measured by viewing the red Flow Indicator (5) line on the piston relative to the precalibrated numerical scale, mounted on the outer surface of the transparent flow meter body.

NOTE: The piston assembly carries a cylindrical magnet on all EZ-View Flow-Alert™ models. This magnet is necessary to activate the AC, DC or Reed switch modules when flow conditions are too high or too low.

Operates in any position: The Hedland in-line flow meter's unique spring loaded variable area design allows meters to be installed in any position without effecting accuracy. It can be installed into horizontal or vertical lines, or with an optional inverted flow scale, this meter can monitor flow in a downward flowing (i.e. gravity feed) line.

Easy-to-read scale: This flow meter is the most readable product in its class. A brightly colored Flow Scale (6) contains bold, easy-to-read numerals and gauge marks. This enhanced resolution virtually eliminates parallax problems associated with competitive, direct reading flow meters.

Accuracy within $\pm 5\%$ full scale: The EZ-View Flow Meter accuracy is within $\pm 5\%$ of full scale while monitoring liquids with viscosity and specific gravity similar to factory calibrated fluids.

Repeatability within $\pm 1\%$: This is particularly important in cyclical applications, which require consistent readings.

Operating Temperature: Maximum operating temperature is 250 °F (121 °C).

Operating Pressure: Maximum operating pressure is 325 psi/22.4 bar.

Rugged Construction: Flow meters are available in brass, stainless, and PVC fittings, with NPT or BSP ports (see Ordering Information Tables). Constructed of high-impact polysulfone plastic, this simple variable area flow meter contains a minimum number of moving parts, offering a reliable, trouble-free flow rate indicator to monitor a wide range of liquids and gases.

Note: Inlet and outlet pipe supports are recommended to prevent breakage.

EZ-View® Flow Meters

General Design Features

No flow straighteners or special piping: The Hedland design does not require special plumbing or accessories to stabilize turbulent flow. Flow meters can be installed immediately adjacent to 90-degree elbows or other components providing system design flexibility.

Filtration: Although Hedland flow meters are more contamination tolerant than most fluid system components, 200 mesh (74 micron) or better filtration is required to assure reliable performance.

Standard flow scales:

Standard flow scales are calibrated in gallons per minute (gpm) and liters per minute (lpm) at 0.876 specific gravity for petroleum-based fluids, 1.0 specific gravity for water and water-based emulsions.

Special flow scales: Special scales are available in any measurement unit and/or specific gravity.

Viscosity Effect (SUS/cSt): Hedland's design utilizes a precision-molded, sharp-edged orifice and biasing calibration spring that ensures operating stability and accuracy over the wide viscosity range common to many fluids. Generally, high flow models provide good accuracy over a viscosity range of 40 to 500 SUS (4.2 to 108 cSt).

Density Effect (specific gravity): Any fluid density change from stated standards has a square-root effect on meter accuracy. Special scales can be supplied if actual specific gravity decreases accuracy beyond application limits.

Corrections for more or less dense fluids can be made to standard scales using correction equations. Refer to pages 4-6.

EZ-View® Flow Meters

With Flow-Alert™ Flow Switch

Flow Switch Options and Specifications:

The AC and DC powered Flow-Alert Flow Switch modules consist of a latching relay circuit housed in a sealed polypropylene enclosure. The modules have a normally open dry relay contact that can be used to directly control alarms, warning lights, relays or be used to interface to a PLC. The relay will be latched on as the magnet inside the flow meter passes by the module, and remain latched on until the magnet passes in the other direction or power is interrupted. The set point is adjustable from 0 to 100% of full scale.

The Reed Switch Flow-Alert modules are housed in a sealed polypropylene enclosure. The reed switch module does not provide the latching function like the AC and DC powered units. When the magnet inside the flow meter comes within proximity of the module, the reed switch will change state. The set point is adjustable from 0 to 100% full scale. Two reed switches providing low flow and high flow set points may be installed on a single flow meter.

EZ-View® Flow Meters

In-Line Test Kits

- Simultaneously monitors in-line flow & pressure
- Compact & self-contained
- Mounts in any position
- Easily carried in tool kit

Here is a convenient, low-cost diagnostic tool to help you check flow and pressure simultaneously. The EZ-View in-line test kits were designed to measure flow from 0.5 to 28 GPM (2 to 106 LPM), and operating pressures up to 160 psi (11 bar).

This compact, self-contained unit is easy to install, and can be used as a permanent monitoring indicator, or as a temporary troubleshooting tool to help: **check pump leakage under load, verify proper flow, pressure or control settings, locate line restrictions, verify pressure drops and balance multi-line systems.**

SPECIFICATIONS:

MATERIALS:

Polysulfone plastic body, piston and cone
Radel® R plastic body and cone, polysulfone piston

COMMON PARTS:

Spring: T300-series stainless

Indicator Ring: Buna N

Pressure Seals: Buna N

Fittings: C360 brass, PVC, or T303 stainless steel

Limit Indicators: Polypropylene

Retaining Ring: PH15 – 7MO stainless

OPTIONAL (consult factory):

Spring and Retaining Ring: Teflon® coated

Load Valve:

Polyvinyl Chloride (PVC) - 1 body

Polypropylene Ball

Teflon® Ball Seat

Ethylene Propylene (EPDM) O-ring

FITTINGS/ THREADS:

Flow Meter: NPT – 1 inch male / ANSI/ASME B1.20.1

Load Valve: NPT – 1 inch female / ANSI/ASME B1.20.1

TEMPERATURE RANGE: +32 °F to +150 °F (0 °C to +65.6 °C)

PRESSURE RATING: 325 psi / 22.4 bar maximum

PRESSURE GAUGE:

0 to 160 psi (0 to 11.0 bar) with internal shock dampeners and blowout patch

PRESSURE DROP: See Differential Pressure Chart, page 70

ACCURACY: ±5% of full scale

REPEATABILITY: ±1%

DIMENSIONS:

BADGER METER, INC. (“BADGER METER”) GENERAL SALES INFORMATION

Purchase Orders

Minimum order size is \$50.00 plus freight charges. Blanket orders and special product orders are subject to extraordinary charges for delivery schedule changes and/or cancellations.

Transportation Terms

Pricing and shipments are free on board (F.O.B.) factory. Badger Meter assumes no liability for damaged or lost shipment. Claims must be made by the customer to the freight carrier. Product title transfers to the customer at the factory dock. Prices and specifications are subject to change without notice.

Payment Terms

Net 30 days of invoice date to companies with approved line of credit. For new accounts, please allow two weeks for credit approval. Badger Meter accepts American Express, MasterCard, Visa, and Cash. Accounts with balances exceeding 30 days are subject to cash on delivery (C.O.D.) status. All orders are subject to written acceptance by Badger Meter. Buyer's terms and conditions are not accepted unless approved by an authorized officer of Badger Meter.

Delivery Dates

Delivery dates are estimates only and may be subject to delays due to influences beyond the control of Badger Meter.

Export

Terms, discounts, special packing and conditions of sale for purchase orders originating from or for shipment to final destination outside the fifty states of the USA and Canada will be furnished upon request. Payment shall be made in United States currency. Shipments are Ex Works the Badger Meter factory (e.g. the buyer is responsible for the cost of freight, cost of insurance, taxes/duties and customs fees).

Customer Validation

Badger Meter reserves the right to determine OEM qualifications of any and all buyers or to request end customer invoicing in situations where project pricing may have been granted by the factory. For complete and governing purchase terms, visit <http://www.badgermeter.com/Company/Legal/Purchase-Terms.htm>.

BADGER METER RETURNED GOODS POLICY

Any product to be returned to Badger Meter for credit, warranty or servicing must have a Returned Material Authorization (RMA) logged into the Badger Meter Return Material System within the previous 90 days. Any return without an RMA will not be accepted. Please note that all returns are conditional, pending inspection by Badger Meter.

Requesting an RMA

The following information will be required to process an RMA: a reason for return and the invoice number of purchased item to be returned. Please contact Badger Meter Customer Service to initiate the RMA and assign a number to the return.

Returned Goods Labeling

The RMA number must be visible on the returned material packaging. The RMA number must be clearly labeled on the outside of the carton. Returned goods without an RMA will be refused by the receiving department at Badger Meter.

Inbound Freight

Upon issuance of an RMA all goods shall be shipped prepaid to Badger Meter. The customer is responsible for freight for returns unless otherwise agreed to in writing in advance. If Badger Meter agrees to pay for freight at the time the RMA is logged in, the Customer Service Representative will e-mail or fax the customer a list of Badger Meter Approved Carriers and Freight Policy.

Badger Meter shall not be responsible for damage caused by inadequate return packaging or shipping. Please package returned products in their original packaging or equivalent to ensure that they will arrive undamaged.

Warranty Returns

Any warranty returns may be repaired or replaced at the discretion of Badger Meter. See the governing warranty statement at www.badgermeter.com. Warranty repairs will be returned to the customer at no charge via ground freight only. If you require overnight or other special arrangements, this will be available at the customer's expense.

Service/Calibration Returns

Before a customer returns any product for service/calibration, and before Badger Meter begins any work, the customer must deliver a written purchase order to Badger Meter, including acceptance of Badger Meter payment terms and pricing. The customer is responsible for both inbound and outbound freight.

Warranty and Service Return Special Instructions

Before shipping your equipment, please be sure to remove any customer-supplied items such as end fittings, enclosures, wiring, etc. Shipping these items with your equipment increases the cost of both inbound and outbound freight and serves no purpose. Badger Meter will not "reassemble" non-Badger Meter parts and is not responsible for loss of any accessories not needed in testing and/or repair. Products must be thoroughly cleaned and any process chemicals removed before sending for service/calibration. Non-compliant returned goods will be returned to the customer untouched at the customer's cost.

Returns for Credit

All returns are at the sole discretion of Badger Meter. All returns for credit are subject to a 25% restocking charge. If an offsetting order is placed, and the offsetting value is equal to or greater than the value of the returned goods, then the restocking charge is 15%. No credit will be allowed unless the returned items are currently in production, and are in new and re-saleable condition, at the sole discretion of Badger Meter. Any returned goods beyond 90 days from the date of invoice, any special/custom (e.g. non-standard) configurations, any slow-moving products, or any private-labeled products are subject to refusal of a return for credit at the sole discretion of Badger Meter. In these situations if a return for credit is authorized, a restocking charge greater than 25% may be imposed.
